**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of claims 1-2 and 4-7 in the reply filed on 01/22/07 is acknowledged.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(a)/(b) as being anticipated by Fukushima et al. ("Molecular Ordering of Organic Molten Salts Triggered by Single-Walled Carbon Nanotubes" Science, 27 June 2003, vol 300, pages 2072-74).

Fukushima et al. disclose a polymerizable ionic liquid with single wall nanotubes used as a gelling medium for electronic devices and coating materials (see at least abstract and pages 2072 and 2074).

Accordingly, the teachings of Fukushima et al. anticipate the material limitations of the present claims.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 1751

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukushima et al. and further in view of Baughman et al. (US 6,555,945) or Smela ("Conjugated Polymer Actuators for Biomedical Applications" Adv. Mater., 17 March 2003, vol 15, pages 481-494) or Jager et al. ("Microfabricating Conjugated Polymer Actuators". Science, 24 November 2000, pages 1540-1545).

Fukushima et al. disclose the gel composition with the SWNT, ionic liquid and polymer but do not explicitly disclose the schematics of a device utilizing the gel composition. In an analogous art, Baughman et al. or Smela or Jager et al. recite the method of making various actuators that utilize gel polymer with electrolytes (see at least Baughman et al.: col 4, lines 28-54; col 17, lines 41-61 and col 18, lines 11-44; Jager et al.: page 1541-42; Smela: pages 485-486). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the composition of Fukushima et al. into the actuators of Baughman et al. or Smela or Jager et al. as suggested by Fukushima et al. resulting an enhancement in the adhesive and response properties of the actuators. Furthermore, it would have been obvious to a skilled artisan in the electronic device art to modify any structural schematics of the actuators such as the numbers of layers, the thickness and alternating patterns of the electrodes to achieve a specific application such as greater bending angle and response times.
